Product Claims

1 Liquid-Applied Protection Technology

Excalibur NanoFilm is professionally applied as a liquid and forms a transparent, seamless protective layer over the vehicle's paint. It is a different application and protection technology from conventional ceramic coatings and ready-made protective films.

2 Protection Against Stone Chips and Surface Scratches

Excalibur NanoFilm adds protection over the original paint against the mechanical wear of everyday use, such as stone chips, surface scratches and friction. It helps reduce the damage these mechanical effects can cause to the paint surface.

3 Seamless Protection Across All Painted Surfaces

Excalibur NanoFilm is applied to all painted body surfaces of the vehicle. It adapts to every body shape without cutting, stretching or film edges, forming seamless surface protection.

4 Heat-Activated Self-Healing

The special surface structure of Excalibur NanoFilm renews itself with heat on fine surface scratches and light wash marks. Self-healing performance depends on the depth and nature of the damage; deep scratches and damage that reaches the paint are not covered.

5 Advanced Self-Leveling

After application, the advanced self-leveling structure of Excalibur NanoFilm evens out across the surface for a smoother finish, strengthening the paint's color depth and gloss.

6 High Chemical and UV Resistance

Excalibur NanoFilm is engineered to withstand the common cleaning chemicals, environmental contaminants and UV exposure met in automotive use.

7 2 Years of Protection Performance

With professional application and under the warranty conditions, Excalibur NanoFilm delivers 2 years of protection performance.

Tested Technical Properties

9H surface hardness

TÜV Rheinland · ISO 15184

High-pH wash resistance

Hydrophobic & oleophobic surface
